TYPE: pwd

When you type pwd it will show you your directory which is: /Users/veronicaramirez

If you want to change the directory to see what directories you can go into TYPE: ls and then it will show you all the ones you can go into.

So if you wanted to go to Desktop TYPE: cd Desktop
cd stands for change in directory.

TYPE: pwd to view the directory you're in. As you can see you're in the Desktop folder.

Now TYPE: ls to view all the files under Desktop

So if you wanted to go to the pictures file you would need to TYPE: cd pictures

TYPE: pwd to view the directory you're in right now. It's very helpful to see where you are/

If I wanted to go up a directory you will need to TYPE: cd .. and now you're back in Desktop.

Mkdir is for making a directory so it will make a folder. TYPE: mkdir folder

Then TYPE: ls So now if you want to go into that new folder TYPE: cd folder now TYPE: pwd to check if you're in the new folder

Then TYPE: rm -rf folder enter and then TYPE: clear to clear the terminal

TYPE: touch newfile.txt if you wanted to make a make a new file

TYPE: ls you will see you have the file.

TYPE: code newfile.txt to open the file in Visual Studio Code
